MARK VINCENT A. CUEVA

Senior Software Engineer | AI Engineering · Full-Stack TypeScript · ERP Integrations

cuevamarkvincent@gmail.com | +63 968 650 6973 | Philippines

SUMMARY

Senior Software Engineer with 2.5+ years shipping production systems. Core engineer on a multi-tenant maritime SaaS that went live for a major Philippine shipping line in 2026, owning its NetSuite ERP integration and billing-critical freight workflows. Builds **AI-native engineering workflows** (Claude Code subagents, skills, AI code review in CI) and LLM features, and works directly with clients through demos, UAT and go-live.

TECHNICAL SKILLS

AI / LLM: Claude Code (custom subagents, skills, slash commands), Claude API & tool use, AI-assisted PR review in CI, prompt engineering, LangChain RAG, OpenAI GPT, Model Context Protocol (MCP), OCR document pipelines

Languages & Frameworks: TypeScript, JavaScript, SQL, Python, Java; Next.js 15, React, tRPC, Node.js, Express, Spring Boot

Data & Infra: PostgreSQL, Prisma, Redis, MongoDB, Neon; Vercel (preview envs, Blob), Inngest, GitHub Actions, AWS Lambda, Azure

Integrations & Testing: NetSuite SuiteScript 2.x RESTlets (OAuth 1.0), Maya/GCash payments, Jira REST & webhooks; Playwright, Vitest, Jest, Selenium

EXPERIENCE

Software Engineer → Senior Software Engineer | Softype Inc. *Jan 2025 – Present*

Aquarius 2.0: maritime SaaS for freight, passage, gating and vessel operations. Promoted to Senior in Apr 2026 (15 months).

- Core engineer from the 2.0 build through production: **1,300+ commits** (top-2 of 20+ contributors) on a Next.js 15 / tRPC / Prisma / PostgreSQL platform with **65+ tRPC routers**; shipped **Go-Live (Jul 2026)** and **Roll-Out 2 (Sep 2026)**.
- Built the **NetSuite two-way ERP sync** with SuiteScript RESTlets for Sales Orders, Item Fulfillment, Customer Deposits and Refunds, mapping B/L → Sales Order and gating → fulfillment → auto-invoice. Owned schema alignment and centavo-accurate totals, cutting booking time by 35%.
- Owned billing-critical freight logic: revalidation, vessel swap, partial loading and the B/L lifecycle, **lock-based B/L number generation**, surcharge waivers, void eligibility rules, VAT and 7% withholding tax, and cash/cheque A/R routing. Also built Maya/GCash payment webhooks with audit logging.
- Shipped **customer-portal ID verification**: OCR validation of PWD, Senior and driver's license IDs, Blob storage, discount gating.
- Built finance reporting (summary, reconciliation with VATable/exempt split, Excel/CSV export, manifests, official receipts) plus voyage groups, connecting voyages and fleet seat layouts.
- **AI-native development:** wrote Claude Code **subagents** (vessel swap, voyage groups, freight/passage test automation), **project skills** (freight revalidation, connecting voyages, NetSuite RESTlet, PR descriptions) and slash commands. Ran AI code review on PRs in CI and agent-driven backend/frontend conformance audits.
- Built a **Playwright E2E regression suite** (Page Object Models, per-role auth states, NetSuite payload verification without live calls, idempotent seeding) on nightly GitHub Actions; wrote **45+ Vitest test suites**.
- **Client-facing delivery:** led the NetSuite Item Fulfillment demo. Was on the team for the Aquarius 2.0 module demos and the 3-day Roll-Out 2 client demo (booking & payment, gating/vessel ops, partial loading & B/L), plus UAT, go-live support, admin retraining and weekly client updates.

SofTrack: internal Jira time-tracking and resource analytics platform.

- Built event-driven Jira worklog sync with sync history, team webhooks, monthly approval workflow, category-trend analytics and an executive teams view. Added **Redis caching (60%+ fewer Jira API calls)**, fixed cross-timezone worklog bugs and hardened CI with Neon branch databases and self-healing Prisma migrations.
- Automated internal reporting with GPT and LangChain RAG; presented a company **Tech Talk** on Claude Cowork + Rovo AI for Jira.

Junior Software Engineer | Ease Solutions *Jun 2024 – Dec 2024*

- Built a custom Jira plugin from scratch (Atlassian SDK) with dictionary-driven workflow automation that extends the Jira REST API; set up client Jira environments (workflows, permission schemes, boards).
- Optimized Spring API fetching for tree/node views; built a Selenium regression suite for CI/CD.

Software Engineer Intern | Alliance Software Inc. *Jan 2024 – May 2024*

- Built a KYC onboarding flow (React, TypeScript) with third-party identity-verification APIs, and a live exchange-rate display.
- Architected an Azure event-driven ETL pipeline and Power BI dashboards (SQL on Azure DevOps data) for sprint velocity, backlog aging and utilization.

CERTIFICATIONS & TRAINING

- **Anthropic:** Claude AI Fundamentals (LLM concepts, prompt design, responsible AI) · Claude API & AI Integration (tool use, production integration)
- **Accenture Technology Academy** (Java Spring, JUnit/Mockito, Docker, CI/CD) · **Zuitt** Java Bootcamp (Spring Boot, JWT/RBAC) and AWS Bootcamp (Lambda, DynamoDB, API Gateway, S3; serverless capstone)

EDUCATION

Bachelor of Science in Information Technology, College of Technology – University
